REPORT NO: C80851847
DATE: August 24, 2018

TEST RESULTS

Remark:

-All concentrations expressed in milligrams per kilogram
 -“<” means less than ; "Y" means "Yes"; "N" means "No"
 -Method for determination of Azo-derived amines are determined by GC-MSD and LC-DAD
 -The test results only apply to the items tested.
 -The following samples were not tested due to insufficient weight of samples (less than 0.2g):
 -The following samples were not tested due to white colour:
 Interpretation of test results:
 (1) In the case of levels per amine component $\leq 30\text{mg/kg}$
 According to the analysis as carried out, azo colorants which can release one or more of certain listed amines by cleavage of their azo groups were not detected in the commodity submitted.
 (2) In the case of levels per amine components $> 30\text{ mg/kg}$, the following statement should be marked
 i. 4-aminodiphenyl, 2-naphthylamine: The use of certain azo colorants cannot be reliably ascertained without additional information, e.g. the chemical structure of the colorants used. The product from which the sample was taken may have been coloured with colorants whose structures contain the amines but not azo bound.
 ii. 4-methoxy-m-phenylenediamine: The use of certain azo colorants cannot be reliably ascertained without additional information, e.g. the chemical structure of the colorants used. The product from which the sample was taken may be coloured with an azo colorant whose structure does not contain performed 4-methoxy-m-phenylenediamine but 2-amino-4-nitroanisole; in the course of the analytical procedure, the azo colorant will release 2-amino-4-nitroanisole, which in turn will form 4-methoxy-m-phenylenediamine.
